SV Series
Insert Manual

For complete installation instructions, see the Tube Heater General Manual that accompanies this Series Insert Manual.

The SV Series Infrared Tube Heater is a negative pressure, single-stage radiant heater system. This insert manual is a supplement to the Tube Heater General Manual and provides specific information related to the SV series model. All persons involved with the installation, operation, and maintenance of the heater system must read and understand the information in this insert manual and the accompanying Tube Heater General Manual.

⚠ WARNING

Improper installation, adjustment, alteration, service, or maintenance can cause property damage, injury, or death. Read the installation, operation, and maintenance instructions thoroughly before installing or servicing this equipment.

This heater must be installed and serviced by trained gas installation and service personnel only. Failure to comply could result in personal injury, asphyxiation, death, fire, or property damage.

In locations used for the storage of combustible materials, signs must be posted to specify the maximum permissible stacking height to maintain the required clearances from the heater to the combustibles. Signs must either be posted adjacent to the heater thermostats or, in the absence of such thermostats, in a conspicuous location.

Not for residential use! Do not use this heater in the home, sleeping quarters, attached garages, etc. Installation of a commercial tube heater system in residential indoor spaces may result in property damage, serious injury, asphyxiation, or death.

For Your Safety

If you smell gas:

- Do not try to light any appliance.
- Do not touch any electrical switch.
- Do not use any phone in your building.
- Immediately call your gas supplier from a neighbor's phone.
- Follow the gas supplier's instructions.
- If you cannot reach your gas supplier, call the fire department.

INSTALLER: Present this manual to the end user.
Keep these instructions in a clean and dry place for future reference.

Contents

NOTE: See page 10 for a list of available models and specifications.

1.0 Safety

⚠ WARNING

Read and understand all safety information and warnings in this manual before installation, operation, and maintenance of the radiant tube heater system.

Safety Labels and Their Locations

Product safety signs or labels should be replaced by the product user when they no longer are legible. Contact either your local distributor or the product manufacturer for obtaining replacement signs or labels.

WARNING

Avoid Serious Injury, Death, or Property Damage.
Maintain Clearances to Combustible to Prevent the Risk of Fire.

Clearances to combustibles must be maintained at all times in order to prevent the ignition of combustible materials. In locations used for the storage of combustible materials, signs must be posted to specify the maximum permissible stacking height to maintain the required clearances from the heater to the combustibles. Signs must either be posted adjacent to the heater's thermostats or, in the absence of such thermostats, in a conspicuous location. Clearances are provided on the heater's safety label and in the heater's Installation, Operation, and Maintenance manual. Product installation and operation must comply with applicable standards, codes, and regulations. Post this tag adjacent to the heater's thermostat or controls before operating the heater.

California Proposition 65

This product can expose you to chemicals including lead and carbon monoxide, which are known to the State of California to cause birth defects or other reproductive harm.

For more information go to www.P65Warnings.ca.gov.

- INSTALLER: READ AND POST THIS NOTICE -

F/N: LL001 - Clearance Safety Tag
(Affix adjacent to heater's thermostat).

SERVICE ACCESS PANEL

IGNITER & FLAME SENSE COMPARTMENT

1. Turn off gas & electricity.
2. Remove cover by lifting top cover upward and outward.

CAUTION: HOT SURFACE.
KEEP COVER IN PLACE. REMOVE FOR SERVICE ONLY.

F/N: LLTB026

⚠ INSTALLER

AVOID EQUIPMENT FAILURE

THIS 10 FT. TUBE IS THE COMBUSTION CHAMBER.

The combustion chamber utilizes either 409 stainless, titanium alloy or aluminized steel - depending on the model number of your heater.

THIS TUBE MUST BE THE FIRST TUBE FOLLOWING THE BURNER CONTROL BOX.

Rotate the tube's welded seam to bottom. Consult the manual(s) for further details.

F/N: LLTB004 (orange)

F/N: LLTB033

NOTICE

The 24 volt wire (14 ga. multistrand required) **must** be installed a minimum of 18 inches from the reflector and outside of the clearance to combustibles zone.

The 24 volt wire **must** also allow for several inches of heater expansion.

F/N: LLTB032

Clearances to Combustibles

⚠ WARNING

Placement of explosive objects, flammable objects, liquids, and vapors close to the heater may result in explosion, fire, property damage, serious injury, or death. Do not store or use explosive objects, liquids, or vapors in the vicinity of the heater.

Clearance to combustibles is defined as *the minimum distance that must be maintained between the tube surface, or reflector, and any combustible items* (see Figure 1.1). It also pertains to the distance that must be maintained from moving objects around the tube heater. Refer to Chart 1.1 to determine the required distances for your model.

Chart 1.1 • Clearances to Combustibles in Inches (see Figure 1.1 for Mounting Angles)

Model Number	Mounting Angle*	Side		Top	Below
		Front	Behind

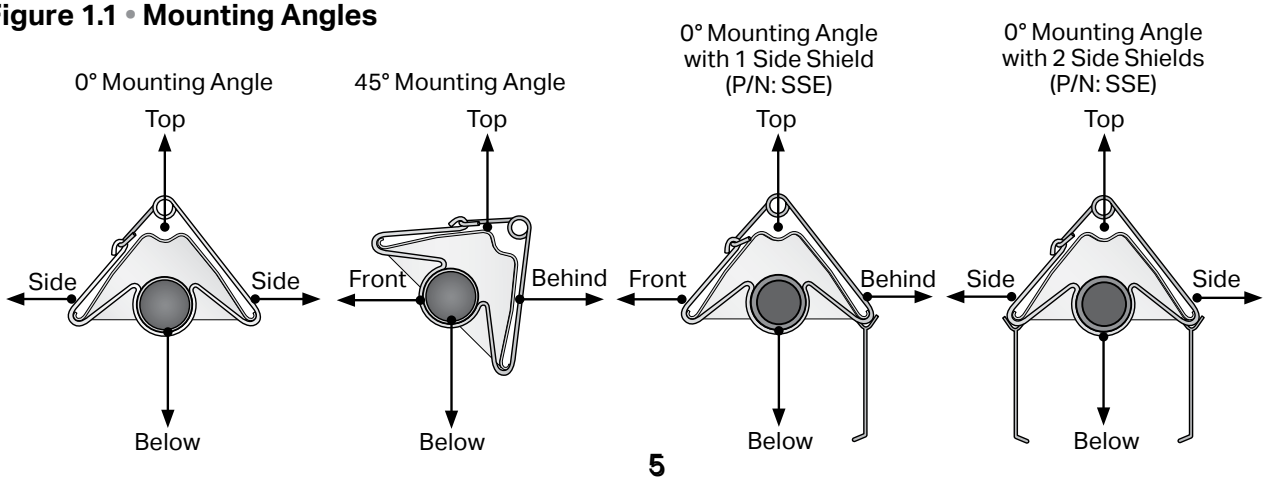
*****Heaters mounted on an angle between 0° and 45° must maintain clearances posted for 0° or 45°, whichever is greater.

The stated clearance to combustibles represents a surface temperature of 90°F (50°C) above room temperature. Building materials with a low heat tolerance (such as plastics, vinyl siding, canvas, tri-ply, etc.) may be subject to degradation at lower temperatures. It is the installer's responsibility to assure that adjacent materials are protected from degradation.

Figure 1.1 • Mounting Angles



2.0 Installation

⚠ WARNING

Not for residential use! Improper installation, adjustment, alteration, service, or maintenance can cause property damage, serious injury, or death.

Read and understand the installation, operating, and maintenance instructions thoroughly before installing or servicing this equipment. Only trained, qualified gas installation and service personnel may install or service this equipment.

Instructions for the following are detailed in the Tube Heater General Manual:

- Design considerations
- Hanger suspension and placement
- Tube layout and assembly
- Burner control box suspension
- Reflectors (and accessories)
- Venting and combustion air intake
- Gas requirements
- Baffle assembly

Note: Electronic versions of all manuals are available at www.detroitradiant.com

Gas Requirements

Type of Gas	Required Manifold Pressure	Minimum Inlet Pressure	Maximum Inlet Pressure
Natural	3.5 Inches W.C.	5.0 Inches W.C.	14.0 Inches W.C.
Propane	10.0 Inches W.C.	11.0 inches W.C.	14.0 Inches W.C.

NOTE: Check manifold pressure at the tap on the gas valve. Small variations in manifold pressure (actual vs. published) may exist due to changing atmospheric conditions. Readings will be above atmospheric pressure.

IMPORTANT: Consult the Tube Heater General Manual for gas connection requirements.

Electrical Requirements

⚠ WARNING

Electric Shock

Field wiring to the tube heater must be connected and grounded in accordance with national, state, provincial, and local codes, and to the guidelines in the Tube Heater General Manual and Series Insert Manual. In the United States refer to the most current revisions to the ANSI/NFPA 70 Standard and in Canada refer to the most current revisions to the CSA C22.1 Part I Standard.

Power to the exhauster assembly is supplied via a 120 VAC-60 Hz. connection and controlled via a thermostat or switch. The burner control box is powered by 24 VAC via the terminal plug connection from the exhauster power box assembly. See Figures 2.1-2.2.

- 120 VAC - 60 Hz GRD, 3-wire
- Starting current 3.0 Amps
- Running current 2.0 Amps

The use of 14 ga. minimum multi strand wire (field supplied) is required to connect the exhauster assembly to the burner control box. A round terminal plug accepts two (2) 1/4" insulated female spade terminals (field supplied).

IMPORTANT: The wire (field supplied) connecting the exhauster power box assembly to the burner control box **must** be mounted a minimum of 18 inches from the top of the reflector and outside of any other clearance requirements. The span of wire **must** allow for several inches of heater expansion.

Thermostat

SV series heaters require a 120 VAC thermostat to operate. **NOTE:** Different thermostats operate according to their particular features. Refer to thermostat specifications for details.

NOTE: The wire (field supplied) is **not** where the thermostat is tied into. The thermostat switches the 120 VAC supply voltage. Refer to field wiring diagrams (Figures 2.1A & 2.1B).

Wiring

NOTE: If any of the original wire as supplied with the appliance must be replaced, it must be replaced with wiring material having a rating of at least 600 V, 105° C.

Figure 2.1 • Field Wiring Diagrams

A. Line Voltage Thermostat Wiring - Single thermostat (20 A), up to six heaters.

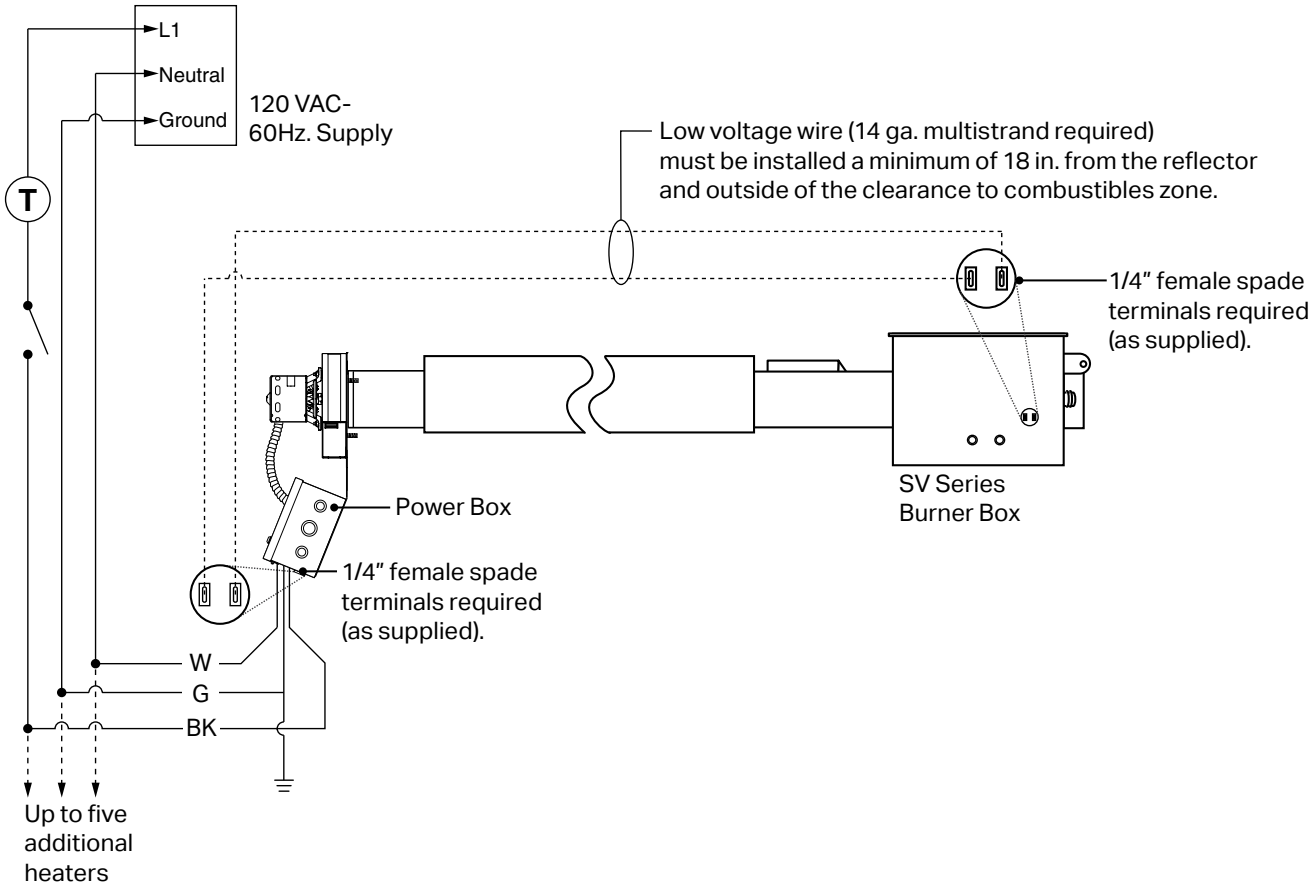


Figure 2.1 • Field Wiring Diagrams

B. Low Voltage Thermostat Wiring (with optional R8285B transformer relay) - Up to Five Heaters per branch.

See Figure 2.6 for exhauster assembly dimensions.

* Model requires stainless steel tube clamp (P/N: TP-220) to be located at the seam between the first and second 10 ft. tube sections downstream of the burner control box.

** Model requires 5EA-SUB accessory package when installing in a 'U' configuration (P/N: TF1B).

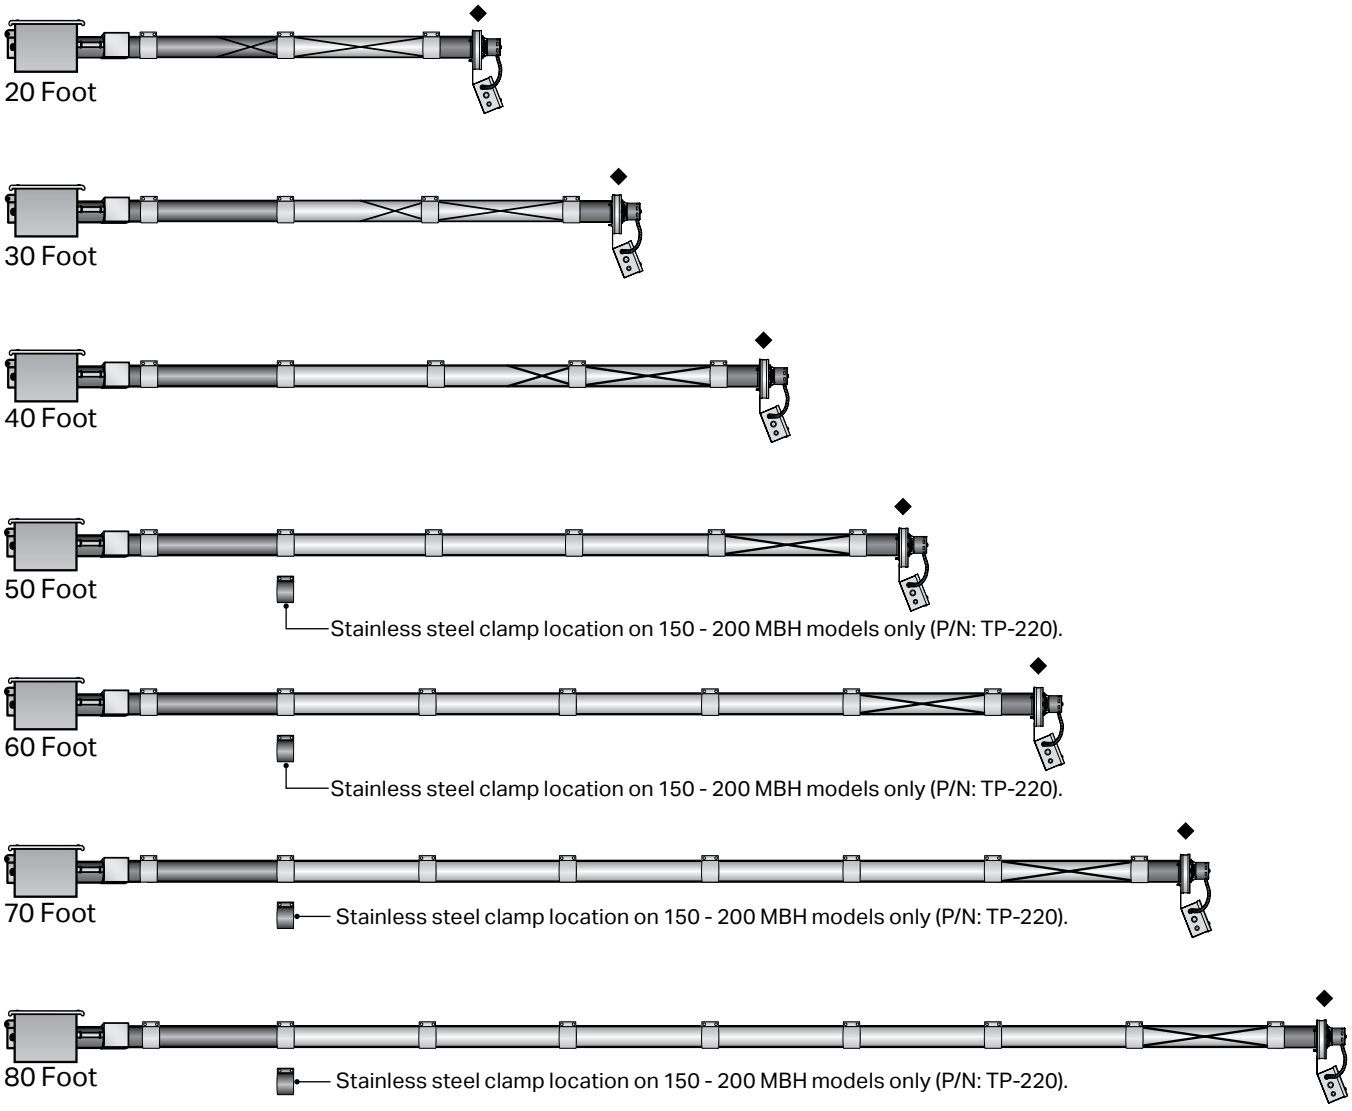
Titan = Black coated titanium stabilized aluminized steel.

Alum = Black coated aluminized treated steel.

Tube Installation Sequence

Figure 2.4 • Tube Installation Sequence

Important! The combustion chamber and radiant tube sections must be installed in the following order.



Key

- Burner Control Box with 16" Burner Tube
- Combustion Chamber
- Coated Aluminized Radiant Emitter Tube
- Baffle Location
- Standard Tube Clamp
- Stainless Steel Tube Clamp (P/N: TP-220)
  150-200 MBH models only - Located between 1st and 2nd 10 ft. tube sections.
- Exhauster Pump Assembly
- Security Chain Location (P/N: THCS)

Note: Refer to the Tube Heater General Manual, Chart 3.6 (page 23) for secured reflector joints.

Exhauster Mounting Details

When installing this heater in a U-shaped configuration, the exhauster assembly and the burner control box must not interfere with each other. When looking at the U-shaped configuration from behind, the burner control box is on the left and the exhauster assembly is on the right. See Figure 2.5.

Figure 2.5 • Exhauster Assembly Mounting Details - U-Shaped Configuration

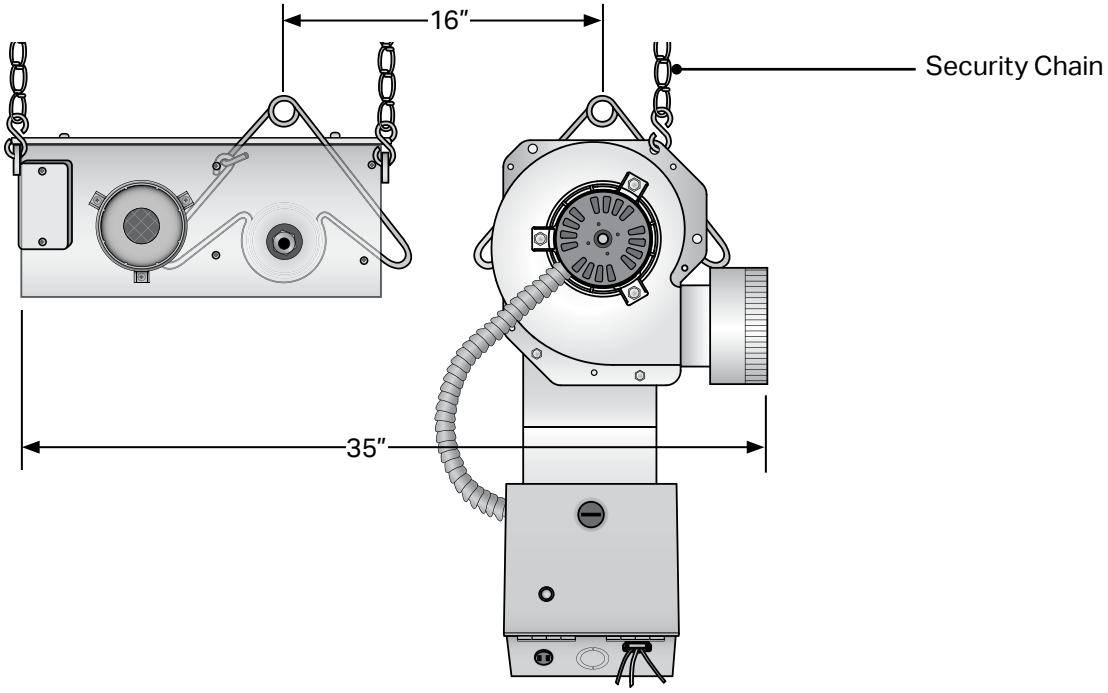


Figure 2.6 • Exhauster Assembly Dimensions

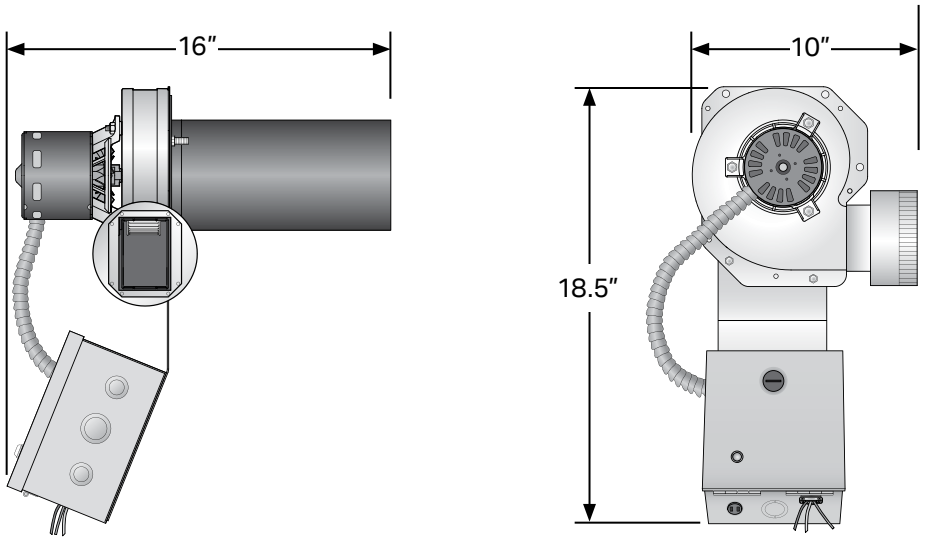


SIDE VIEW **END VIEW**

3.0 Operation

⚠ WARNING

This heater must be installed and serviced by trained gas installation and service personnel only.

Do not bypass any safety features or the heater's built in safety mechanisms will be compromised.

NOTE: Reference the Tube Heater General Manual (F/N: LIOGTa) for installation requirements.

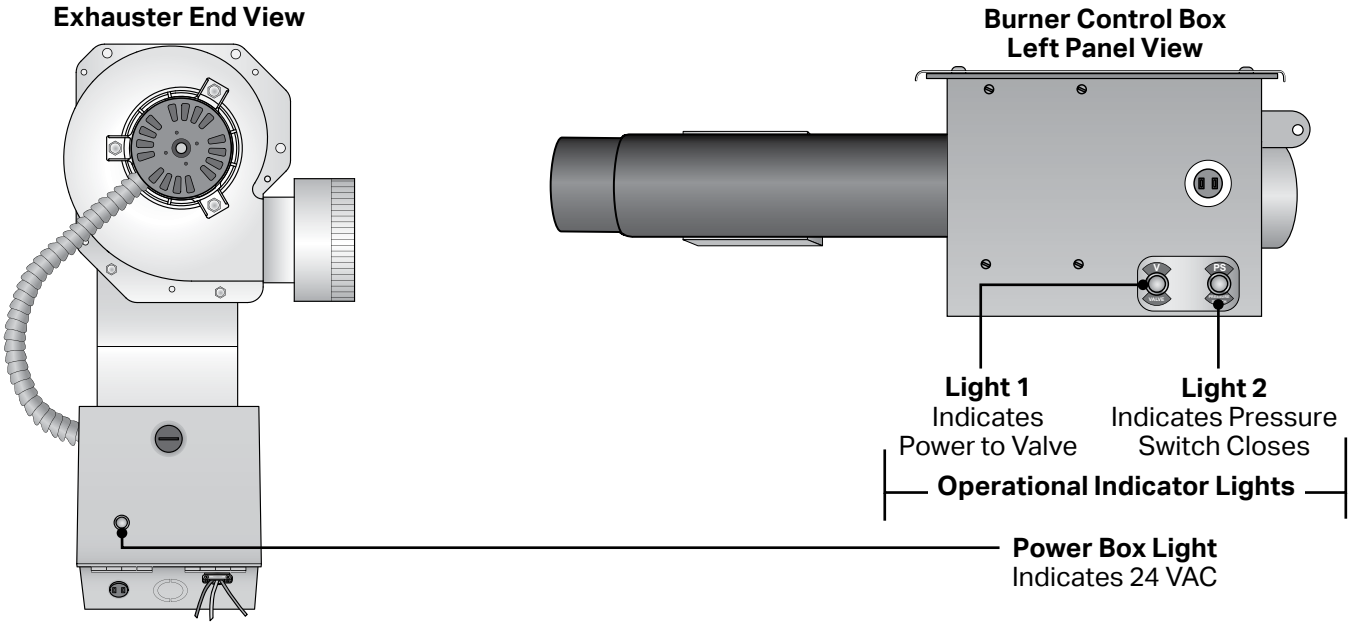
Sequence of Operation

Starting Circuit: Upon a call for heat, the exhauster fan energizes creating a negative air pressure allowing the differential pressure switch to close. A low voltage circuit is completed from the secondary side of the transformer to the ignition module. After a five (5) second delay, the igniter is powered. After seven (7) seconds, gas valve opens initiating the ignition trial. If flame is not sensed after 15 seconds, the heater will attempt to re-ignite for a total of three (3) trials for ignition before entering lockout mode.

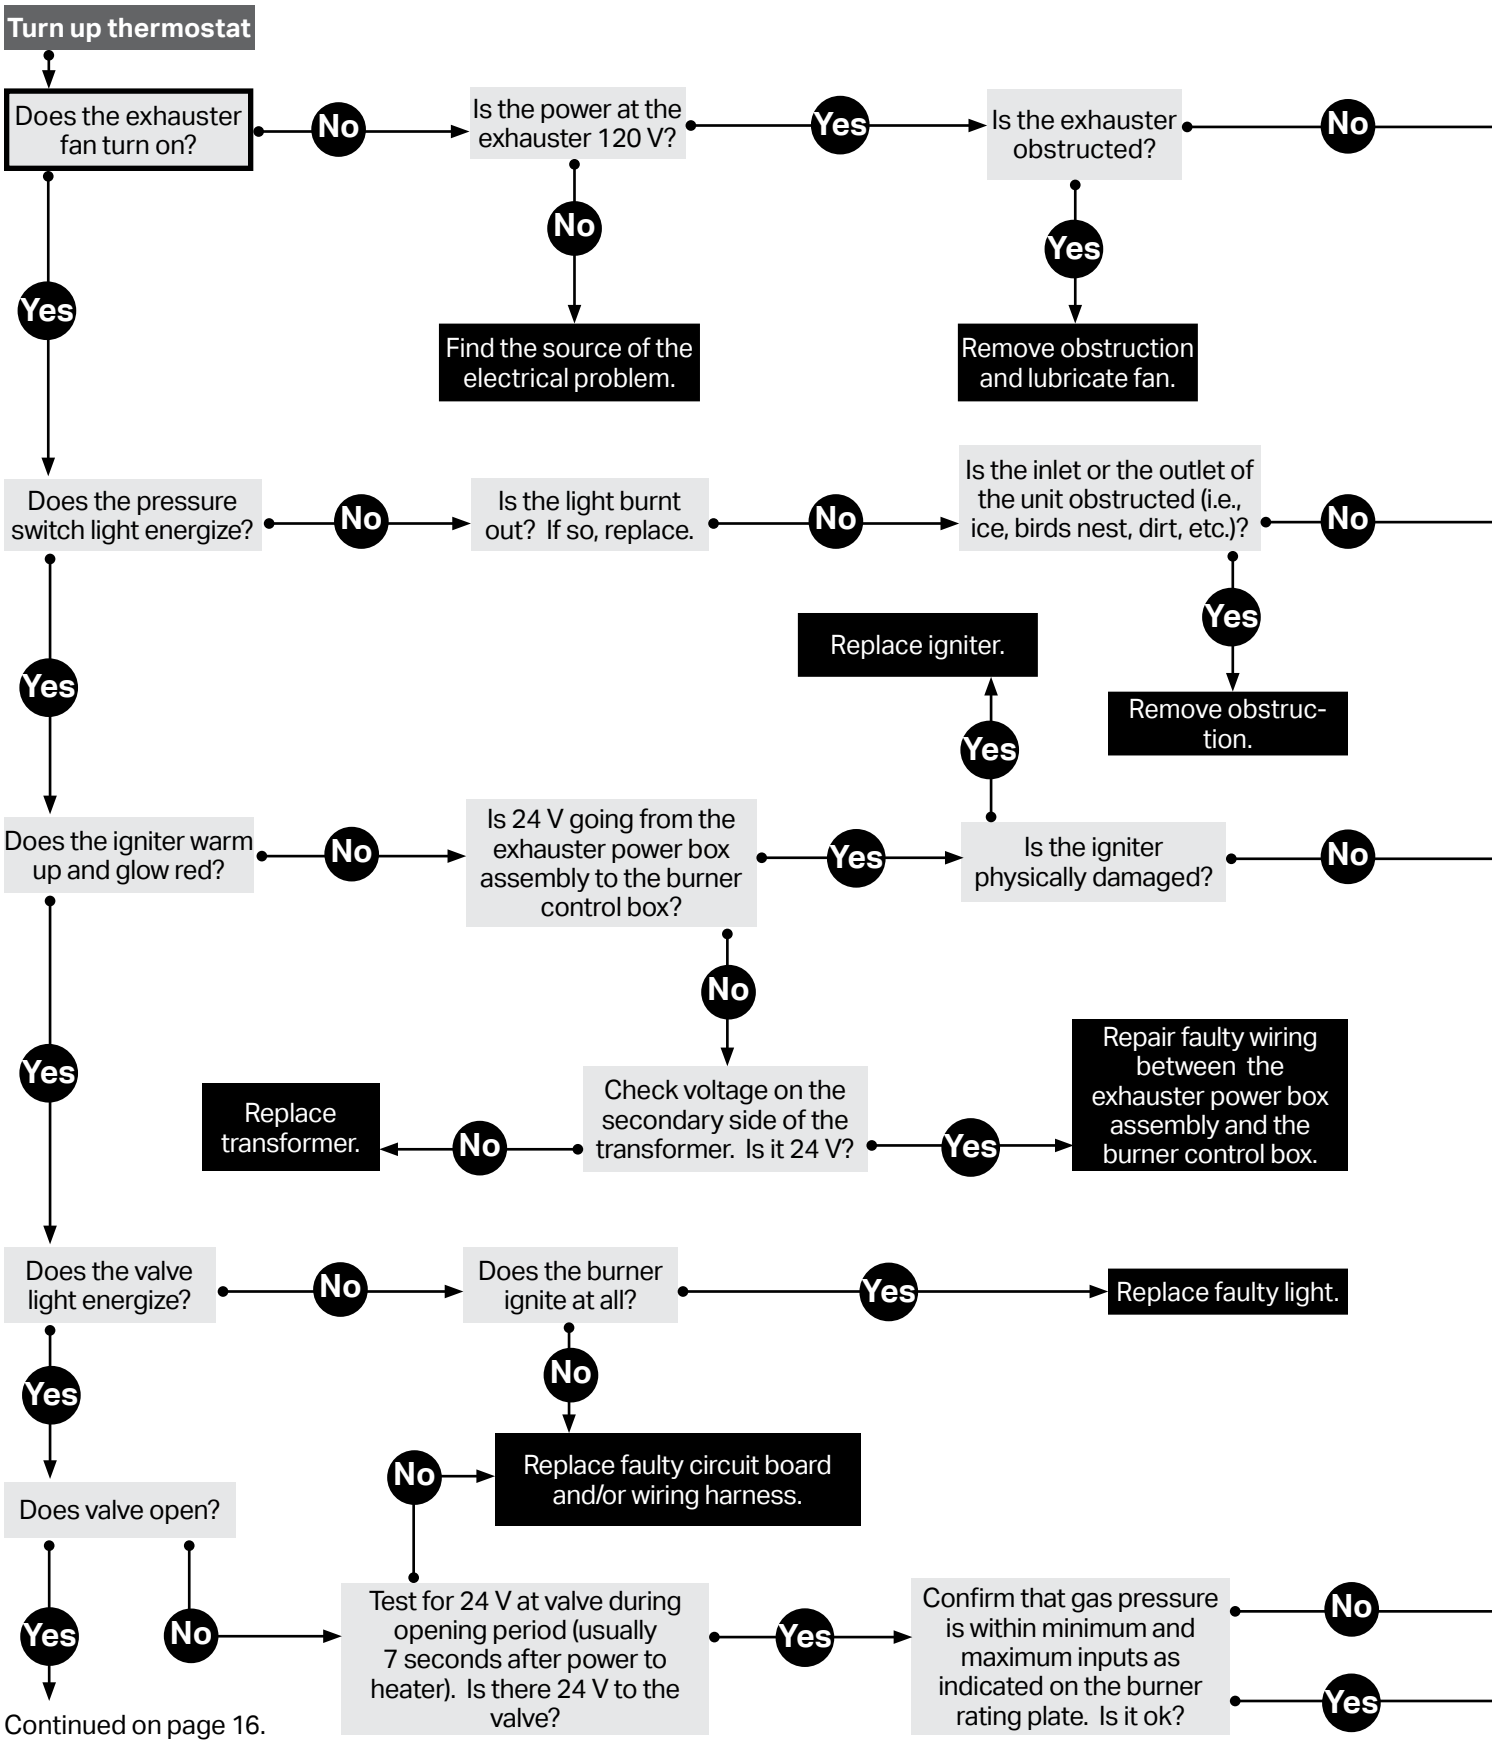
Running Circuit: After ignition, the flame rod monitors burner flame. If sense of flame is lost, the control closes the gas valve within one second and a new trial sequence (identical to the starting sequence) is initiated. If flame sense is not established within 15 seconds, the heater will attempt two (2) additional ignition sequences before entering lockout mode. The control can be reset by briefly interrupting the power source.

Operational Indicator Lights

Figure 3.1 • Operational Indicator Lights

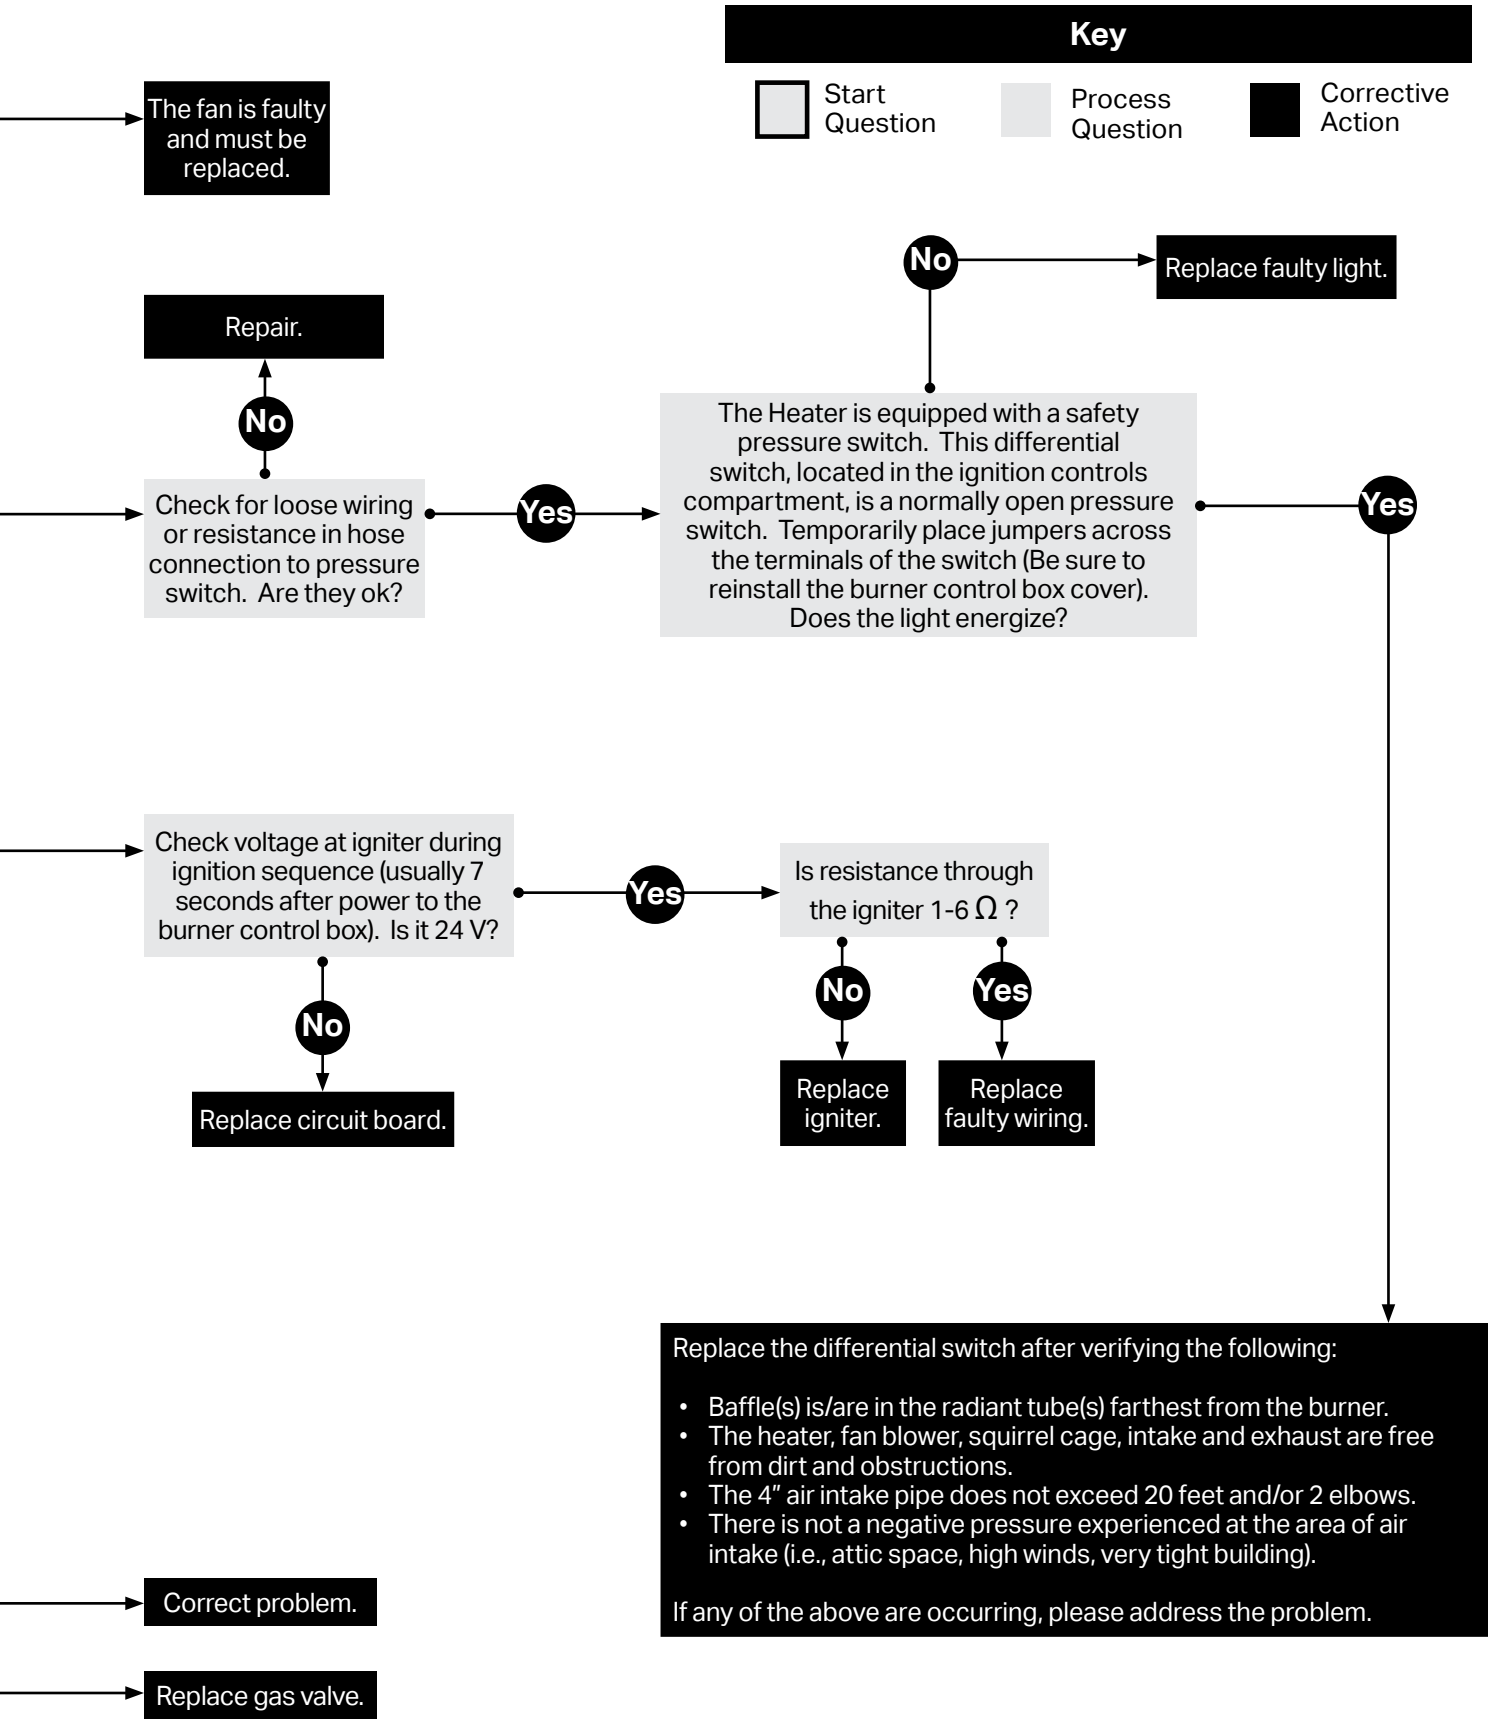


4.0 Troubleshooting Guide

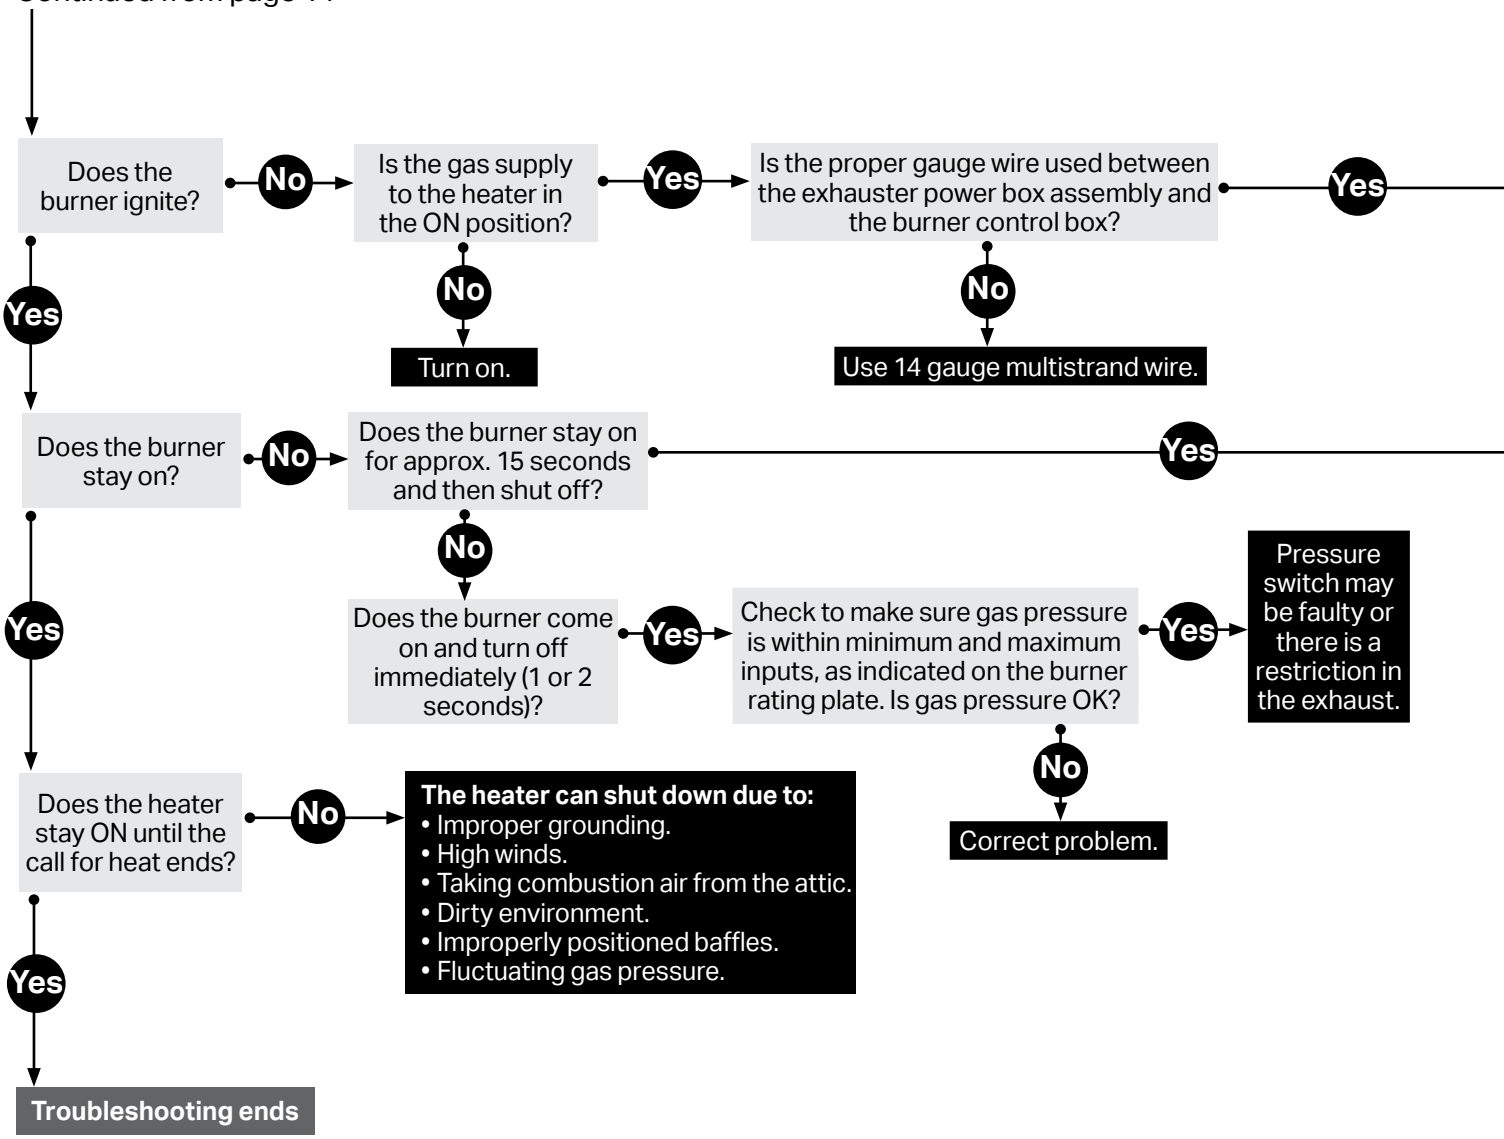


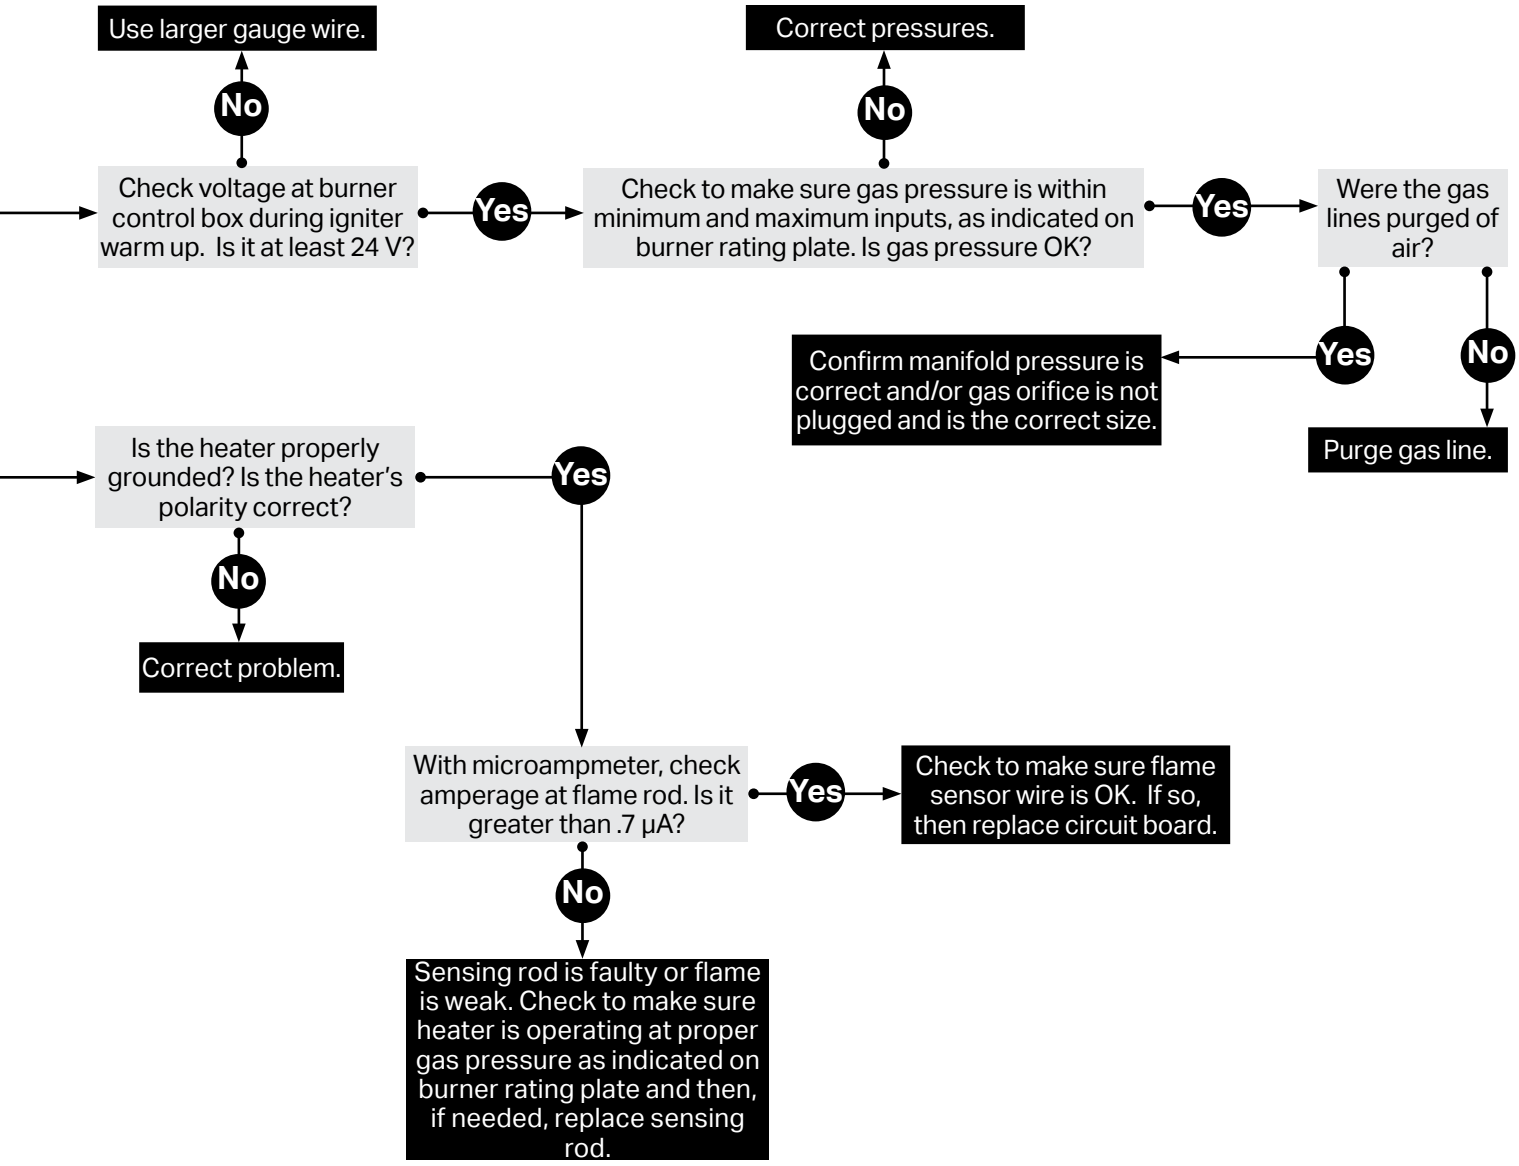
Continued on page 16.

NOTICE Bypassing any switch is intended for testing purposes only. Do not leave switch bypassed during normal operation or the heater's built-in safety mechanisms will be compromised.



Continued from page 14





Use larger gauge wire.
No
Check voltage at burner control box during igniter warm up. Is it at least 24 V?
Yes
Correct pressures.
No
Check to make sure gas pressure is within minimum and maximum inputs, as indicated on burner rating plate. Is gas pressure OK?
Yes
Were the gas lines purged of air?
Yes
No
Confirm manifold pressure is correct and/or gas orifice is not plugged and is the correct size.
Purge gas line.
Is the heater properly grounded? Is the heater's polarity correct?
Yes
No
Correct problem.
With microampmeter, check amperage at flame rod. Is it greater than .7 µA?
Yes
Check to make sure flame sensor wire is OK. If so, then replace circuit board.
No
Sensing rod is faulty or flame is weak. Check to make sure heater is operating at proper gas pressure as indicated on burner rating plate and then, if needed, replace sensing rod.
